MEETING MINUTES

Objective:
- Acquired the skill of establishing a connection between a local development environment (VS Code) and a remote version control system (GitHub) through terminal commands. Introduced to the fundamentals of composing basic SQL queries for database interaction.

Agenda:
- Connecting a GitHub Repository to VS Code via the Terminal
- Executing SQL Queries on Databases
- Exploring Introduction to Practice Resources
- Engage in three mini projects focused on SQL exploration.

Key takeaways:
- **Git & VS Code:** Explored connecting GitHub repositories to VS Code via the terminal, enhancing version control practices.
- **SQL Queries:** Familiarized with crafting basic SQL queries to engage with databases, including selecting, filtering, and sorting data.
- **Action Item:** Tasked with uploading the authored SQL file to our GitHub repository for collaborative access and management.
- Explored and completed three mini projects aimed at enhancing SQL exploration skills.
